Simulating Social Influence in Groups

Samantha Kneefel, Borre Mosch, Evert Haasdijk, Dick de Gilder, Tibor Bosse

## Model

Communication between interrelated individuals

Belonging to a group

Action

Research Question

How do group identities develop, based on the dynamic interplay between network structure, inter-/intragroup interaction and group actions?

Simulation

Next Steps

- Validation & parameter estimation of the model
- Numerical analysis of simulation
- Simulate specific scenarios
- Towards an algorithm for emergent robot team composition
