Application Areas

Big Data Visualization
- Load data from RDBS, CSV, and soon SPARQL
- Automatic data integration and selection suggestion at scale with SynerScope Legato
- Run SynerScope on your GPU accelerated laptop computer
- Run SynerScope remotely on a server with GPU acceleration
- YarcData partner, SPARQL on supercomputers
- Connect your data to search engines

Network Analysis
- Show all the data, not just aggregates
- Take a network-centric view on data
- Assume all networks are time-dependent
- Show various dimensions simultaneously with Multiple Coordinated Views
- Test network hypotheses with Hierarchical Edge Bundling
- Extend your data with context using the Web View plugin system
- Project data into the visualization tool with schema mapping
